TOOLING FOR OKUMA • MACHINE TOOL ACCESSORIES

Velocity Products distributes **Tooling for OKUMA** and innovative machine tool accessories throughout North America. As part of one of the largest machine tool distributors in North America, Velocity is able to use first hand input from our sales and application engineering colleagues when choosing, designing, and optimizing OKUMA tooling and machine tool accessories. Velocity strives to provide instantaneous service and 100% satisfaction for all of our customers.

VELOCITY TOOLING FOR OKUMA

Velocity Products has the largest inventory of lathe tooling for OKUMA in North America. Velocity/SU-matic tooling is designed and manufactured by SU-matic – a worldwide leader in tooling technology headquartered in Switzerland. SU-matic works closely with engineers from OKUMA America, OKUMA Japan, and OKUMA Europe when designing new tools. This engineering collaboration ensures flawless tooling performance on OKUMA lathes, multitasking machines, and machining centers. SU-matic has several OKUMA machine tools in their manufacturing facility. Velocity/SU-matic is the OEM supplier of static tooling startup kits for OKUMA lathes. Velocity/SU-matic tooling is available only for OKUMA machine tools.

VELOCITY OKUMA CERTIFIED PULL STUDS

Velocity OKUMA Certified pull studs are specifically designed for OKUMA spindles. The tolerances and surface finish to which Velocity pull studs are machined results in increased tool life and better part surface finishes. Velocity OKUMA Certified pull studs are machined from SNCM 420 (JIS)/4320 (ASTM) alloy steel, hardened to HRC 52 - 58, and all surfaces are finish ground. All Velocity pull studs are coolant through.

VELOCITY ULTRA-BRIGHT LED MACHINE TOOL LIGHTING

Velocity ultra-bright LED lighting products are designed and manufactured **specifically for use in a machine tool environment**. Velocity ROMA lighting features extended life LED's, completely impervious assemblies sealed to IP68, and tempered glass lenses. Velocity ROMA series enclosures are machined from solid aluminum and feature powerful Neodymium rare earth magnets for quick and secure mounting.

VELOCITY VMP-8 COOLANT FILTER

Coolant Filtration is Essential! All internal coolant tools require coolant filtration. External coolant tools - and static tools - can also benefit from coolant filtration. **Swarf can find its way into all static and live tools** and clog coolant nozzles, degrade seals between the mounting plate and tool body of live tools, and eventually damage the bearings of live tools. Swarf can also clog coolant hoses and lock lines in a machine tool and clog coolant lines in the manifold of a lathe turret. **MP Systems**, a sister company of Velocity Products, is renowned for their high pressure coolant systems and accessories. MP Systems has designed a stand alone **VMP-8 Differential Coolant Filter** that is tied to a machine tool alarm circuit to protect Velocity SU-matic tooling - and a machine tool - from damage caused by swarf in coolant or cutting oil.
